**9. Instructions**

1. Fill in the **General Information** section.
2. Identify the sample by **Sample No. #** or **Code**. Please also mark the **Processing Method** and **Manufacturing Date** (or week, or month) if known.
3. Fill in the **Layer Specification** section by specifying the raw **Material** (e.g. PE-LD, PA, EVOH, Adhesive, ...) and nominal **Thickness** of each individual layer. Mark additional **Notes**, e.g. pigmentation (colors) or other special additives used in some particular layer if applicable. Specify the **Refractive Index** if known (this can be left blank if not known).
4. Use the **Remarks** section to write down special requirements/instructions regarding the sample if necessary.
5. Mark the actual sample with the same **Code or Sample No. #** used above and **specify the Surface "A"** by a piece of adhesive tape or other label for example.
6. Prepare the sample stripes. Some 3...5 stripes are recommended.

NOTE I: The ideal sample size is a stripe with width of approx. 25 mm (1.0 in) and minimum length of 30 cm (1.0 ft.). Cutting the sample stripes **across the line direction** is recommended.

NOTE II: The sample material could be delivered also as a sheet. Davinor will prepare the stripes prior to analysis.
